281 is treated by the method used for making chamois leather. First of all, the hide is stretched tight on the ground with pegs all around the edges. With a knife the hair and the particles of meat and fat still attached to it are scraped off carefully. When the hide is almost dry, the pegs are removed, it is rubbed with fat or butter and then beaten thoroughly, piece by piece, with both hands until it has become smooth and pliable (No. 19, p. 425). Finally the hide is rubbed with a little white residual soil (kaolin) so as to give it a nice appearance. Hides to be used as blankets are treated in the same manner, but the hair is not removed.

326 177 In the field of ironwork the performance of the Barundi is good, even excellent. This is really surprising since reportedly the forging technique was brought to Urundi from the northeast, probably from Kissaka, at the time of King Ruganza of Ruands, i.e., approximately 200 years ago. The art was introduced, it is said, by a legendary person, Kigwe. [412] [411] Van der Burgt writes me that "before that period wooden hoes were used for cultivating the soil, and arrows and spears were made entirely of wood." An old Mutwa told van der Burgt that in his youth he had seen such wooden utensils himself. According to my observations such wooden hoes and weapons do not exist any more. Van der Burgt is mistaken in assuming that 135 316 325 the backwardness of the Urundi iron industry can be explained by the fact that there are no iron ore deposits in Urundi (No. 19, p. 250). I found excellent iron (itschjuma) in the form of limonite and specular iron ore in many places. On the other hand, I can confirm that the Barundi do not know how to mine and smelt these local iron ores. In Ruanda I saw smelting furnaces in full operation, but there are none in Urundi. The 326 [439] Barundi blacksmiths only work iron imported from other areas. Some of it is imported in the form of hoes from Usindja (southern part of Lake Victoria) with the help of the Baha and Bassuwi, and some of it is European iron wire which is brought into the country by way of Lake Tanganyika. The Bahutu and Batwa blacksmiths convert this imported iron into the forms of hoes, knives, chopping knives, spear points, arrowheads, arm
